Encompass Developer Connect

Your portal to faster digital mortgage innovation.

Unlock innovation to expand your competitive advantage

Encompass Developer Connect™ provides lenders, independent software vendors, and partners the tools they need to develop and deliver innovative solutions that streamline business operations and rise above the competition, including:

- **Application programming interfaces (APIs):** Easily customize and extend Encompass capabilities and integrate external data and solutions
- **Interactive documentation:** Find what you need quickly, without navigating through multiple pages
- **API playground:** Test drive our APIs and explore new capabilities
- **Developer resources:** Get a good head start with user guides, use cases, sample code, and snippets
- **Developer community:** Connect with innovators from across the mortgage industry to glean insights, grow your network, and expand your expertise

Increase the power of Encompass and your business

Use Encompass Developer Connect to:

- Easily build, integrate, and extend Encompass® to meet your business needs
- Streamline operations by using APIs to automate the process of ordering and retrieving reports from service providers for services such as credit, electronic verification, appraisal, underwriting, and more
- Reduce costs and time needed to bring solutions to market
- Engage with developers from across the Ellie Mae® customer base and partner ecosystem
- Integrate external systems and data
- Build and deploy custom applications in the cloud

Harness the power of mortgage-focused APIs

- **Loan.** Allow users to manage loans and data fields/values within loans. Using Loan APIs, users can create a new loan or delete a loan. Users can read, write, and update field values in a single loan or in multiple loans simultaneously. Users can also search for loans and specific fields within a loan, as well as view their loan pipeline.
- **eFolder.** Enable users to upload/download documents, attach/assign/unassign files to documents, and update document properties.
- **Contacts.** Enable users to access and update borrower, business, and partner contact information in the Encompass database.
- **Custom Data Objects.** Allow users to create, store, and manage data that does not have a standard field or custom field associated with it in Encompass. There are 3 types of custom data objects supported: loan-level, user-level, and global-level.
- **Webhooks.** Provide users a secure notification mechanism where notifications are sent to a callback URL subscribed by the client.
- **Services.** Give users the ability to order and retrieve reports from service providers for services such as credit, electronic verification, appraisal, underwriting, and more.

**Benefits**

- Automate manual, time-consuming workflows
- Innovate operations
- Improve efficiency
- Lower costs
- Expand competitive advantage
- Extend Encompass’ capabilities
- Integrate/customize solutions
